Lab for Male Reproductive Research and Testing

DNA Damage Test on Sperm

DNA damage is measured in the laboratory on fresh ejaculates. Please prepare the sample as follows:

1.) Perform semen analysis on sample within 30 minutes after collection.
2.) Measure volume and add an equal volume of TYB.
3.) Place in water in plastic bottle and cool in refrigerator.
4.) Mail by FedEx (overnight delivery). Place ice packs on either side of bottle and place in styrofoam box.

Please Note: A request sheet should accompany each sample along with a check for the payment. SPA and DNA damage can be ordered on the same sample.

Please call the lab at (713) 798-7265 to schedule the test.

♦ Shipping containers with supplies can be mailed upon request.
