ACHIEVING THE AMAZING

Each summer, the Baylor Summer Science Institute engages Houston Independent School District elementary or middle school teachers in an intensive program focused on innovative teaching of science. Teachers leave the Institute energized and armed with creative ideas and resources from Baylor’s Center for Educational Outreach.

This year’s Institute brought teachers and scientists together for a week of hands-on experiments and lessons that provided new knowledge and imaginative ways for teachers to make science and reading more fun and relevant for their students. A great teacher inspires, but who inspires teachers? The Baylor Summer Science Institute does.

Look in the Medical and Science section every Monday and visit bcm.edu to see how Baylor is achieving the amazing in our community.
