How to embed a vBrick video in Blackboard.

Embedding a vBrick video into a content area allows the user to play the video within Blackboard. This is useful for keeping all the accessible content within Blackboard.

Sharing a video in vBrick

1. Log into vBrick https://bcm.rev.vbrick.com with your BCM username and password
2. Search for the video, then click on it so that it opens in the widow
3. Click on the **Sharing** button on the right toolbar. Then click on the **Embed tab.** **Copy** the iFrame code.
4. Log into Blackboard
5. Open the course
6. Navigate to the content area you want to add the video.
7. Click on Build Content
8. Add an Item

9. In the Name field, give the video a title.
10. Click on the HTML button. (if all the editing tools don’t show up, click on the arrows on the upper right of the window, click on the arrows to expand the toolbar options)
11. By clicking on the **HTML** button, a pop-up box will appear. **Paste** the iFrame code in the box and click **Update**. When you are finished, you should see a yellow box.

12. Click **Submit** when finished.

13. If you want additional text about the video that shows up on top of the video, **Edit** the Item by clicking on the **arrow** to the right of the title. Click **Edit** to Edit the text in the Item.

Click on the **HTML (step 10)** button. Click before the iFrame code and add some space by pressing the Enter Button 3 or 4 times. Click the **Update** button.

Ex. (`<p><span style="font-size: 13p)`)
